Y-POINT VENTURE CAPITAL

Website Redesign Strategy & Information Architecture

A complete rethinking of structure, storytelling, content hierarchy, and visual communication for an institutional deeptech venture fund.

PREPARED FOR	DOCUMENT TYPE	DATE	VERSION
Y-Point Venture Capital Fund-I · SINE IIT Bombay	Strategy & Information Architecture	October 2026	1.0

SCOPE

This document redesigns the internal content, hierarchy, storytelling, and visual communication across all six sections of the Y-Point website. The existing navigation structure and design philosophy are preserved. The primary intervention is making the website infographic-heavy — replacing text-dominant layouts with diagrams, visual frameworks, matrices, and data visualisations that communicate the fund's sophistication through the quality of its thinking.

CONTENTS

01 CURRENT STATE ASSESSMENT

02 DESIGN PHILOSOPHY & VISUAL LANGUAGE

03 SECTION 01 — ABOUT US

04 SECTION 02 — PORTFOLIO

05 SECTION 03 — TEAM

06 SECTION 04 — FOCUS AREA

07 SECTION 05 — CONTENT

08 SECTION 06 — APPLY FOR FUNDING

09 COMPLETE INFORMATION ARCHITECTURE

10 DESIGN SYSTEM

11 FINAL RECOMMENDATIONS

01

Current State Assessment

The existing Y-Point website establishes a strong visual identity — minimal, editorial, typographically confident — but its information architecture underperforms its design ambition. The following assessment identifies structural gaps and opportunities.

STRENGTHS

Design Philosophy. Strong minimal aesthetic, premium typography, institutional tone. The rotating sector keywords on the hero (MEDICINE, SILICON, etc.) create dynamism without clutter.

Positioning Copy. "India produces world-class research and world-class venture capital. Very little connects the two." — This is excellent positioning. Sharp, memorable, defensible.

Edge Articulation. The "Y-Point Edge" section uses numbered pillars with concrete claims ("Diligence that reads a test report"). This is the right structure.

Sector Thesis Quotes. Each sector card carries a one-line thesis in quotation marks. These are punchy and reveal genuine investment thinking.

STRUCTURAL GAPS

No ecosystem visualisation. The IIT Bombay / SINE / Y-Point relationship is described in paragraphs. This is the fund's single strongest differentiator and it has no visual representation.

Portfolio section is absent. The current site shows sector cards but no portfolio companies. Investors and founders cannot assess track record.

Team section is invisible. No team members, no credentials, no capability mapping. For an institutional fund, this is a critical omission.

Sector theses are card-only. Six cards with one-line quotes. No deeper thesis frameworks, no technology stacks, no market maps. The intellectual depth is not demonstrated.

Content section is minimal. "Signal from the Lab" newsletter subscribe box is present but no content archive, no podcast, no essays.

Apply section is buried. "Building something hard?" CTA exists but without a qualification framework. Founders cannot self-assess fit.

Infographic deficit. Zero diagrams, zero visual frameworks, zero data visualisations across the entire site. Every idea is communicated through text.

THE CORE PROBLEM

> *The website's design sophistication exceeds its information architecture. The visual language says "institutional deeptech fund" but the content structure says "early-stage landing page." The redesign preserves and extends the former while fundamentally rebuilding the latter.*

02

Design Philosophy & Visual Language

PRESERVED DESIGN PRINCIPLES

Typography-led. Large editorial type drives hierarchy. Headlines carry weight. Body copy earns its place.

Restrained palette. Near-monochrome with a single accent (teal). Colour is used for structure, never decoration.

High whitespace. Generous spacing signals institutional confidence. Empty space is deliberate.

Numbered navigation. 01 — 06 section numbering creates editorial rhythm and reading order.

Thin rules. Horizontal dividers separate content blocks without visual weight.

Minimal copy. Every sentence earns its place. No "We are passionate about..." fillers.

NEW VISUAL VOCABULARY

The redesign introduces a structured diagram language while preserving the editorial aesthetic. Every visual follows the same rules: monochrome + teal accent, thin strokes, generous padding, Helvetica or system sans-serif, and no decorative elements.

DIAGRAM LANGUAGE — 12 VISUAL TYPES

TYPE	USE CASE	EXAMPLE
Flow diagram	Process, lifecycle, pipeline	Lab → Prototype → Product → Scale
Ecosystem map	Relationship networks	IIT Bombay / SINE / Y-Point
2×2 matrix	Portfolio positioning	Tech maturity vs. capital intensity
Pillar grid	Capabilities, differentiators	Why Us — 6 pillars
Value chain	Industry structure	Semiconductor: IP → Design → Fab
Radial / wheel	Sector breakdown	Portfolio by sector
Timeline	History, milestones	Podcast episode sequence
Capability matrix	Team skills mapping	Member × skill dot grid
Decision framework	Investment criteria	Look for / Avoid matrix
Technology stack	Vertical architecture	AI: Foundation → Infra → App
Data card	Company profiles	Logo + sector + stage + milestone
Infographic number	Key metrics	40% follow-on reserve

COLOUR SYSTEM

ROLE	VALUE	USAGE
Primary Black	#0A0A0A	Headlines, primary text
Charcoal	#2D2D2D	Body copy, secondary text
Gray	#666666	Captions, metadata
Light Gray	#E5E5E5	Rules, borders, dividers
Off-White	#F5F5F3	Card backgrounds, diagram fills
Accent Teal	#0D7377	Section numbers, accent bars, active states, diagram connectors

White	#FFFFFF	Page background

TYPOGRAPHY DIRECTION

Primary: A geometric or grotesque sans-serif — the current site uses a system that works well. Recommended: Inter or Satoshi for body, with a heavier weight for display headlines. Scale: Display 48/56 → H1 32/38 → H2 24/30 → H3 16/20 → Body 15/24 → Caption 12/16 → Label 10/14. Tracking: Tight for display (-0.02em), standard for body, wide for labels (+0.08em).

ANIMATION PRINCIPLES

Restrained and purposeful. Diagrams draw themselves on scroll-entry: flow diagrams animate left-to-right, ecosystem rings expand from centre, matrices populate cell-by-cell. Duration: 600–1000ms. Easing: ease-out. No parallax, no particle effects, no hover-induced layout shifts. Scroll-triggered fade-up for text blocks (200ms stagger). Interactive diagrams respond to hover with tooltip overlays, not animations.

MOBILE EXPERIENCE

Flow diagrams reflow to vertical. Matrices become swipeable horizontal scrolls. Ecosystem diagrams simplify to a vertical stack. Pillar grids become single-column cards. The 16px side gutter is maintained. Navigation becomes a full-screen overlay with the same numbered section format.

03

Section 01 — About Us

PAGE OBJECTIVE

Explain who the fund is, what it believes, and why its structural relationship with IIT Bombay and SINE creates a differentiated investment advantage — not through paragraphs, but through visual frameworks that make the logic self-evident.

1. HERO

HEADLINE

"Backing the technologies that move from laboratory to industry."

SUPPORTING LINE

Y-Point is the venture capital arm of SINE, IIT Bombay. We write the first institutional cheque into deep technology ventures at the point where the science works but the company does not yet exist.

VISUAL

Retain the existing rotating keyword animation (MEDICINE, SILICON, ENERGY, etc.) with the geometric wireframe. Add a subtle horizontal ticker below the hero showing: ENTRY: TRL 4–7 · PRE-SEED & SEED · SINE IIT BOMBAY · CATEGORY II AIF · DEEP TECH ONLY

2. THE PREMISE — TRANSLATIONAL CAPITAL

HEADLINE

"India produces world-class research and world-class venture capital. Very little connects the two."

SUPPORTING COPY

Y-Point invests at the point where a technology stops being a research result and has to become a company. By the time we invest, the science usually works. What remains is the harder, less celebrated problem: building a manufacturable product, finding a first customer willing to take a risk on an unproven supplier, and surviving the years in between.

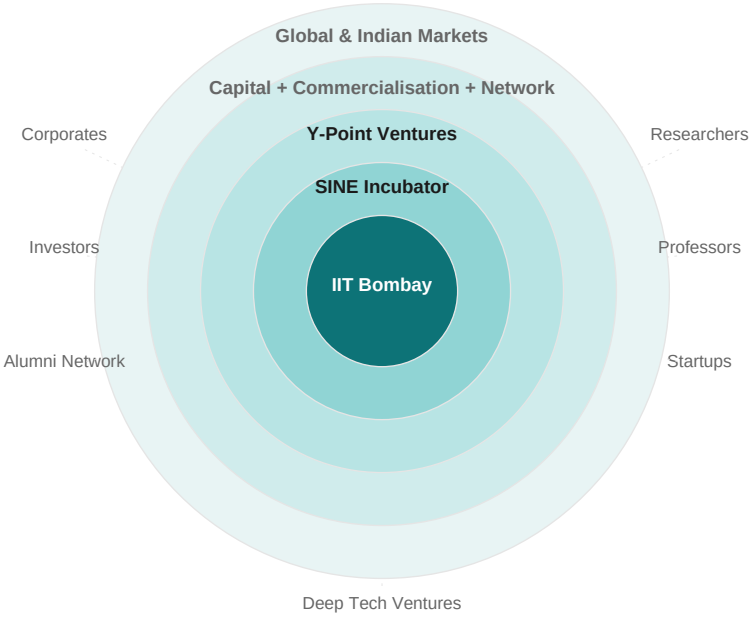

INFOGRAPHIC: THE TRANSLATION GAP

The diagram highlights the "valley of death" between TRL 3 and TRL 7 — the zone where research-grade technology must become a manufacturable product. Y-Point's entire investment thesis operates in this gap. A shaded overlay on the PROTOTYPE → PRODUCT stages marks the fund's zone of entry. Hovering reveals what typically fails at each stage.

3. THE IIT BOMBAY / SINE / Y-POINT ECOSYSTEM

INFOGRAPHIC: CONCENTRIC ECOSYSTEM MAP

This is the most important graphic on the website. It communicates, without a single paragraph of text, how Y-Point's structural position within the IIT Bombay ecosystem creates deal flow, diligence capability, and post-investment support that no standalone fund can replicate. The concentric rings show the institutional layers. Satellite nodes show the actors in the ecosystem. Dashed lines show relationship pathways.

INTERACTION

Rings pulse outward on page entry (600ms, ease-out). Hovering any ring reveals: what that layer provides, e.g. hovering SINE shows "Grant ladder · Prototyping labs · Faculty mentorship · IP transfer · TRL 3→7 progression."

TECHNICAL DEPTH

Ability to read a test report, assess a TRL claim, a characterisation data before any commercial tracti

ECOSYSTEM ACCESS

Structural position inside IIT Bombay / SINE. Acce research groups, specialised labs, and faculty net

PATIENT CAPITAL

Pre-seed and seed investment with 40% follow-on reserve. Milestone-linked deployment across multi-year commercialisation cycles.

COMPANY BUILDING

Hands-on support for first customer acquisition, hi teams, regulatory navigation, and go-to-market str

INDUSTRY NETWORK

IIT Bombay's 65,000+ alumni, 25+ industry partne procurement channels, and co-investor relationshi

LONG-TERM VIEW

Built for the timelines that deeptech demands. Supporting companies through qualification cycles, not just fundraising cycles.

INTERACTION

Cards appear on scroll with 100ms stagger. Hovering expands description text. Each card links to a deeper explanation anchored in the Edge section below.

5. INVESTMENT PHILOSOPHY

HEADLINE

"We do not bet on science. We bet on the translation of proven science into defensible business."

INFOGRAPHIC: THE EVALUATION CHAIN

Each stage represents a question the fund answers during diligence. The company must have cleared the SCIENCE gate (the technology works at lab scale) and show a credible path through ENGINEERING (can be manufactured) before Y-Point invests. The remaining three stages — PRODUCT, MARKET, MOAT — are where the fund's post-investment work focuses.

6. FUND STRUCTURE

INFOGRAPHIC: FUND AT A GLANCE

PARAMETER	DETAIL
Vehicle	SEBI Category II AIF
Anchor	SINE, IIT Bombay
Stage	Pre-seed & Seed
Sector	Deep technology only
Entry point	TRL 4–7

Initial ticket	INR 3–5 Cr
Follow-on reserve	~40% of fund
Portfolio construction	Concentrated; no sector >20%

Only verified fund-level parameters are shown. No fabricated statistics. Presented as a clean data table rather than marketing infographic — institutional investors expect precision, not decoration.

CTA

End of About section links to: "Meet the Team →" and "See the Portfolio →"

04

Section 02 — Portfolio

PAGE OBJECTIVE

Make the portfolio immediately understandable through visual mapping rather than a list of logos. Show portfolio construction logic, sector diversification, and company-level detail in a single scannable interface.

1. PORTFOLIO HERO

HEADLINE

"A concentrated portfolio of companies turning proven science into industry."

SUPPORTING LINE

Each company entered the portfolio because its core technology had cleared the lab and needed capital, customers, and company-building to reach the market.

2. PORTFOLIO MATRIX

INFOGRAPHIC: 2D POSITIONING MAP

A scatter-plot matrix positions each portfolio company as a visual node on two axes:

AXIS	DESCRIPTION
X-axis	Technology maturity / commercialisation stage (Research → Prototype → Product → Revenue)
Y-axis	Capital intensity / technological complexity (Low → Medium → High)

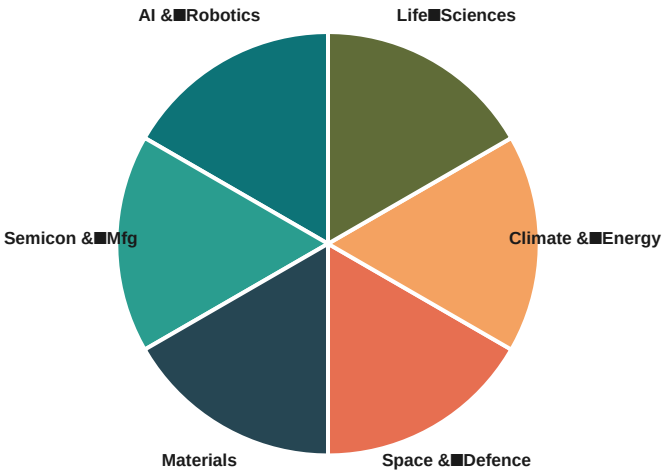

Each node is colour-coded by sector (using the sector wheel colours). Node size optionally reflects cheque size or stage. Hovering a node reveals: company name, one-line description, sector, investment year, and key milestone. Clicking opens the company card.

FILTERS

Toggle buttons above the matrix allow filtering by: Sector · Stage · Technology · Investment Year · Status (active / exited). Filters animate nodes in/out (200ms fade).

3. SECTOR BREAKDOWN

INFOGRAPHIC: SECTOR WHEEL

A radial diagram showing portfolio allocation across the six thesis sectors. Each wedge is proportional to the number of portfolio companies (or capital deployed, if data permits). Hovering a wedge reveals the sector name, number of companies, and one-line thesis.

4. COMPANY CARDS

Each portfolio company gets a visual card — not a paragraph. The card is designed to be scannable in under five seconds.

CARD ANATOMY

ELEMENT	TREATMENT
Company logo	Monochrome, left-aligned, 24px height
One-line description	What the company does in ≤15 words
Sector tag	Colour-coded pill matching sector wheel
Stage	Pre-seed / Seed / Series A
Core technology	The underlying technical approach
Investment year	Year of first cheque
Key milestone	Most significant post-investment achievement

Cards are arranged in a responsive grid (3 columns desktop, 2 tablet, 1 mobile). No long company descriptions. The card should make the technology and stage instantly legible.

5. PORTFOLIO CONSTRUCTION LOGIC

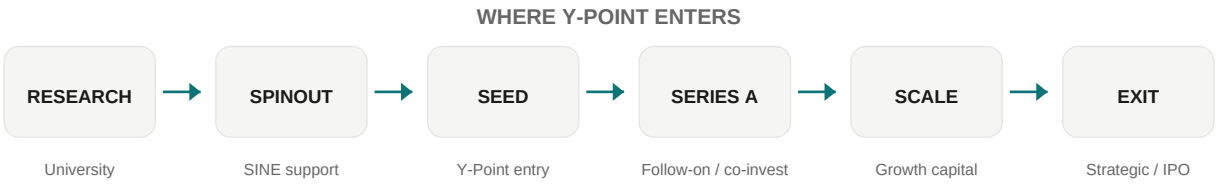

INFOGRAPHIC: CONSTRUCTION FRAMEWORK

Communicates the fund's construction discipline: concentration across multiple sectors, diversification across technology maturity stages and capital profiles, and acceptance of different commercialisation timelines within a single fund.

6. COMPANY LIFECYCLE

INFOGRAPHIC: ENTRY AND SUPPORT TIMELINE

A shaded overlay on the SPINOUT → SEED → SERIES A stages highlights Y-Point's primary zone of engagement. The diagram shows how the fund enters early, supports through milestones, and participates in follow-on rounds before later-stage capital takes over.

CTA

"Explore Our Investment Theses →" · "Apply for Funding →"

05

Section 03 — Team

PAGE OBJECTIVE

Make the team feel credible and technically differentiated without descending into LinkedIn biographies. The team page should make an LP think "these people can evaluate a TRL 5 technology" and a founder think "these people have built companies before."

1. INVESTMENT COMMITTEE

LAYOUT

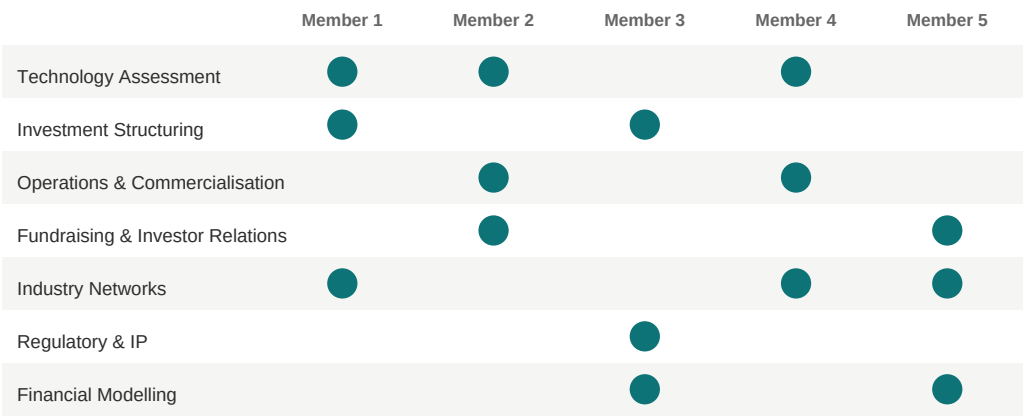

Large, premium black-and-white portraits. Full-bleed within a card. Below each portrait:

ELEMENT	FORMAT
Name	18pt, bold
Role	12pt, regular, gray
One-line responsibility	10pt, italic — e.g. "Leads semiconductor and advanced manufacturing diligence"

No multi-paragraph biographies. No "John is passionate about..." copy. The portrait, name, role, and one line should do the work. A click/tap expands to show: 3 bullet credentials, LinkedIn link.

2. TEAM CAPABILITY MAP

INFOGRAPHIC: CAPABILITY MATRIX

A dot-matrix maps team members against seven capability domains. This replaces lengthy biographies with a single visual that instantly communicates team coverage. Hovering a dot reveals the specific credential (e.g. "15 years semiconductor industry, ex-Texas Instruments"). Actual team member names and capabilities should be populated from verified data.

3. CREDENTIALS — PROOF POINTS

Use large infographic numbers rather than paragraphs. Only verified figures.

METRIC	FORMAT	EXAMPLE
Combined experience	Large number + label	110+ years operator experience
Companies backed	Number + context	X companies across Y sectors

Technology domains	Number	X distinct technology domains
Ecosystem reach	Number	65,000+ IIT Bombay alumni network
Industry partners	Number	25+ institutional industry partners

Presented as a horizontal strip of large-type numbers. Each number animates up from zero on scroll-entry (counter animation, 800ms). No fabricated statistics — use only figures that can be verified.

4. TEAM WITHIN THE ECOSYSTEM

A simplified network diagram showing how the team connects to: IIT Bombay faculty · SINE leadership · Portfolio founders · Industry corporates · Co-investors · Strategic partners. Uses the same visual language as the About section's ecosystem map but focused on relationship nodes that the team directly maintains.

5. SINE / IIT BOMBAY LEADERSHIP

A dedicated visual treatment for the institutional relationship. Show SINE's leadership with the same portrait format as the IC, but in a smaller scale. Include institutional logos (IIT Bombay, SINE) with a clean hierarchical relationship graphic. No unsupported claims about the institution — let the affiliation speak for itself.

CTA

"See Our Investment Theses →" · "Read Our Content →"

06

Section 04 — Focus Area

PAGE OBJECTIVE

This is the intellectual centrepiece of the website. Demonstrate that the fund understands deeptech at a structural level — not by naming sectors, but by revealing the analytical frameworks it uses to evaluate each domain. Every sector thesis should be communicated primarily through diagrams.

1. THE DEEPTECH MAP

HEADLINE

"Six sectors. One common condition: the hard part is the technology, and it has been proven but not yet productised."

INFOGRAPHIC

A full-width hexagonal map showing the six investment sectors as interconnected nodes. Each hexagon contains: Sector name · Sector icon · One-line thesis. Lines between hexagons show where sectors overlap (e.g., AI ↔ Semiconductor, Climate ↔ Materials). Clicking any hexagon navigates to that sector's dedicated thesis framework below.

2. SECTOR THESIS FRAMEWORK

Every sector uses the same eight-dimension analytical framework, communicated visually:

DIMENSION	QUESTION	VISUAL FORMAT
WHY NOW	What shift is happening?	Timeline with inflection marker
WHAT WE LOOK FOR	What attracts us?	Checklist with green indicators
WHAT WE AVOID	What concerns us?	Checklist with red indicators
TECHNOLOGY	Key developments?	Technology stack diagram
MARKET	Commercial opportunity?	Market map or TAM visual
MOAT	Why defensible?	Moat classification matrix
CAPITAL	Funding requirements?	Capital intensity bar
TIME TO SCALE	Commercialisation timeline?	Horizontal timeline

SECTOR 01

AI & Advanced Computing

INVESTING IN THE FUTURE OF SILICON

> *"Models are commoditising. The durable value is moving down the stack."*

WHY NOW

Foundation models are becoming commodities. The bottleneck is shifting from software to hardware — custom silicon, inference acceleration, edge computing, and the infrastructure layer beneath the model.

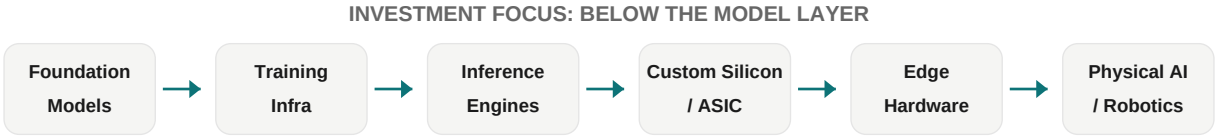

WHAT WE LOOK FOR

+ Custom silicon / ASIC design
+ Inference optimisation hardware
+ Edge AI with proprietary architecture
+ Vertical AI with deep domain data moats
+ Physical AI / embodied intelligence

WHAT WE AVOID

- Wrapper applications on commodity APIs
- LLM fine-tuning without data moat
- AI SaaS without technical differentiation

INFOGRAPHIC: INVESTMENT FOCUS: BELOW THE MODEL LAYER

Shaded overlay highlights where Y-Point focuses its investment within this value chain. Hovering each stage reveals: what happens at this stage, typical company profile, and capital requirements.

SECTOR 02

Advanced Manufacturing & Semiconductor

INVESTING IN THE FUTURE OF THE FACTORY FLOOR

> *"India will not win manufacturing on labour cost. It will win on automation and on silicon."*

WHY NOW

India's semiconductor mission, PLI schemes, and supply-chain diversification away from China are creating structural demand for domestic chip design, EDA tools, packaging innovation, and smart manufacturing systems.

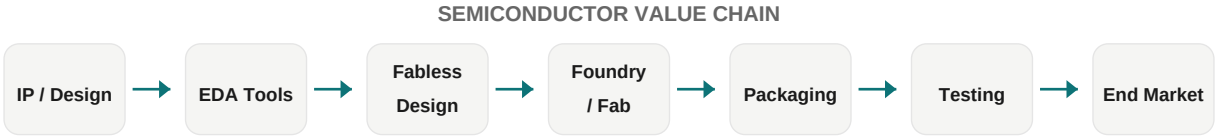

WHAT WE LOOK FOR

+ Fabless chip design
+ EDA and design automation
+ Advanced packaging
+ Industrial automation systems
+ Semiconductor test and metrology

WHAT WE AVOID

- Contract manufacturing without IP
- Generic automation integrators
- Capacity plays without technology edge

INFOGRAPHIC: SEMICONDUCTOR VALUE CHAIN

Shaded overlay highlights where Y-Point focuses its investment within this value chain. Hovering each stage reveals: what happens at this stage, typical company profile, and capital requirements.

SECTOR 03

Next Gen Materials

INVESTING IN THE FUTURE OF MATTER

> *"Every hard problem in energy, space and electronics is a materials problem wearing a disguise."*

WHY NOW

Breakthroughs in computational materials science, additive manufacturing, and sustainability requirements are creating demand for novel materials — from battery cathodes to thermal management to aerospace composites.

WHAT WE LOOK FOR

+ Novel material compositions with IP
+ Materials informatics platforms
+ Sustainable alternatives to critical minerals
+ Application-specific material systems

WHAT WE AVOID

- Incremental material improvements
- No clear application path
- Commodity material production

INFOGRAPHIC: MATERIALS COMMERCIALISATION CHAIN

Shaded overlay highlights where Y-Point focuses its investment within this value chain. Hovering each stage reveals: what happens at this stage, typical company profile, and capital requirements.

SECTOR 04

Space & Defence

INVESTING IN THE FUTURE OF ORBIT

> *"Sovereign capability became a commercial market, and the procurement door is finally open."*

WHY NOW

IN-SPACe liberalisation, iDEX procurement pipeline, and growing private space ecosystem. Defence procurement reforms opening doors for private deep tech companies.

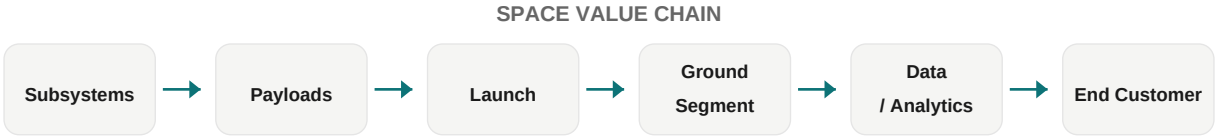

WHAT WE LOOK FOR

+ Propulsion and launch subsystems
+ Satellite payloads and sensors
+ Defence electronics and EW
+ Autonomous systems
+ Space-grade materials

WHAT WE AVOID

- IT services relabelled as defence tech
- No procurement pathway
- Export-restricted without domestic market

INFOGRAPHIC: SPACE VALUE CHAIN

SECTOR 05

Climate & CleanTech

INVESTING IN THE FUTURE OF ENERGY

> *"Decarbonising an industrialising economy is a different problem from decarbonising a rich one."*

WHY NOW

India's decarbonisation challenge is unique — electrification is growing alongside renewable buildout. Need for energy storage, grid management, industrial decarbonisation, and circular economy solutions designed for Indian conditions.

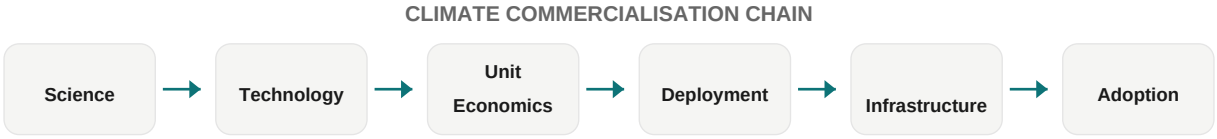

WHAT WE LOOK FOR

+ Novel energy storage chemistry
+ Industrial decarbonisation technology
+ Carbon capture with viable unit economics
+ Grid-scale energy management
+ Circular economy systems

WHAT WE AVOID

- Solar/wind project development
- Green premium without path to cost parity
- Policy-dependent unit economics

INFOGRAPHIC: CLIMATE COMMERCIALISATION CHAIN

SECTOR 06

Life Sciences

INVESTING IN THE FUTURE OF MEDICINE

> *"Indian clinical scale and Indian engineering cost is an advantage nobody else can assemble."*

WHY NOW

India's combination of world-class biological research, massive clinical populations, low-cost engineering talent, and growing regulatory sophistication creates unique opportunities in medtech, diagnostics, and drug discovery tools.

WHAT WE LOOK FOR

+ Novel diagnostic platforms
+ Drug discovery tools and platforms
+ Medtech with India-first design
+ Bioprocessing innovation
+ Computational biology

WHAT WE AVOID

- Me-too generics
- Medical devices without regulatory path
- Clinical-stage drugs (too capital-intensive for fund stage)

INFOGRAPHIC: LIFE SCIENCES TRANSLATION CHAIN

CTA

"See Our Portfolio →" · "Apply for Funding →"

07

Section 05 — Content

PAGE OBJECTIVE

Position the fund as a serious participant in the deeptech intellectual ecosystem. This is not a blog. It is an organised archive of the fund's thinking — structured around formats and sectors, not reverse-chronological posts.

HEADLINE

"Signal from the Lab"

SUPPORTING LINE

What we are seeing in the pipeline, what we are reading, and what founders keep getting wrong.

CONTENT CATEGORIES

CATEGORY	FORMAT	DESCRIPTION
PODCAST	Audio / Video	"Signal from the Lab" — conversations with founders, researchers, and operators in Indian deep tech
RESEARCH	Long-form thesis	Investment theses and sector analyses — the thinking behind the fund's sector focus
ESSAYS	Long-form opinion	Commentary on deep tech ecosystem, policy, and commercialisation challenges
ECOSYSTEM	Interview / Profile	Founder and researcher conversations, ecosystem spotlights
EVENTS	Recap / Announcement	CFO roundtables, founder meetups, technology showcases

PODCAST — VISUAL TREATMENT

Horizontal scrolling carousel of episode cards. Each card shows: Episode number · Guest name · Guest title · Topic · Duration · Play button. The carousel scrolls smoothly with drag or arrow controls. Cards use the same editorial style as the rest of the site — B&W guest photo, minimal text, teal accent.

PODCAST EPISODE TIMELINE

ESSAYS & RESEARCH — VISUAL TREATMENT

Editorial cards in a 2-column grid. Each card shows: Category tag · Title · First line of abstract · Sector tag · Reading time · Date. Cards use generous whitespace. No thumbnail images — the typography carries the visual weight. Filter bar above: All · Podcast · Research · Essays · Ecosystem · Events. Secondary filter: by sector.

CONTENT METADATA

Every piece of content is tagged with: Topic · Sector · Format · Date · Reading/listening time. This enables structured filtering and creates a professional content archive rather than a generic blog feed.

NEWSLETTER SUBSCRIBE

Retain the existing "Signal from the Lab" subscribe prompt. Place it as a fixed bar at the bottom of the content section. Copy: "A monthly note on Indian deep tech. No hype, no fund marketing. Read by 3,000+ researchers and founders." Single email input field + Subscribe button.

CTA

"Subscribe to Signal from the Lab →" · "Apply for Funding →"

08

Section 06 — Apply for Funding

PAGE OBJECTIVE

Reduce friction to zero while clearly communicating what the fund wants. The page should let a founder self-qualify in under 30 seconds and apply in under 5 minutes.

1. HERO

HEADLINE

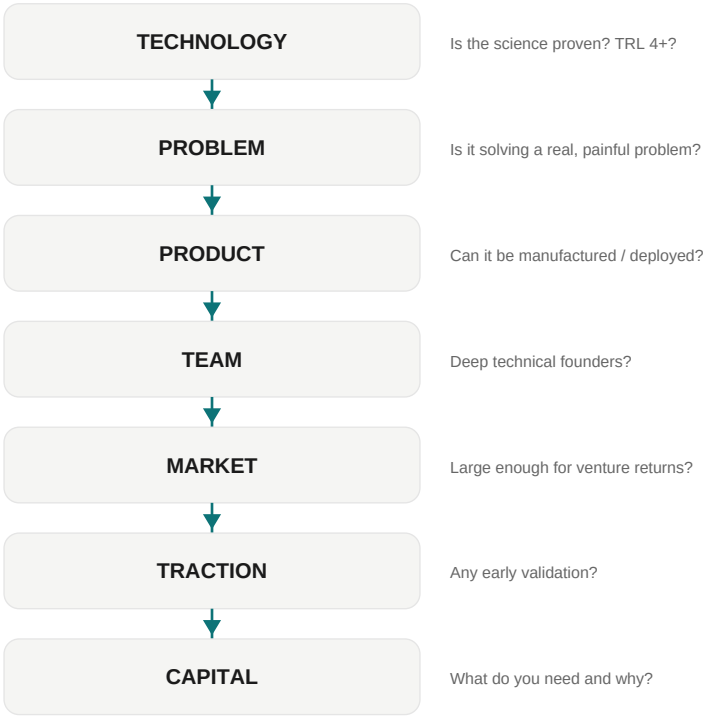

"Building something difficult?"

SUPPORTING LINE

Tell us what you are working on. We read everything, and we answer — including when the answer is no. Initial ticket: INR 3–5 Cr. Response within 10 working days.

2. QUALIFICATION FRAMEWORK

INFOGRAPHIC: WHAT WE EVALUATE

A vertical flow showing the seven dimensions Y-Point evaluates. Each step has a one-line question. The visual helps founders self-assess whether they are at the right stage for Y-Point before applying.

3. LOOK FOR / AVOID MATRIX

WHAT WE LOOK FOR

+ Deep technology with proven science
+ Large addressable markets
+ Exceptional technical founding teams
+ Defensible intellectual property
+ Strong founder-market fit
+ Clear path to first revenue

WHAT WE AVOID

- Incremental software innovation
- Technology without a clear problem
- Weak technical differentiation
- Unclear IP ownership
- Markets too small for venture returns
- Teams without domain expertise

4. CTA — APPLY

A single prominent button: APPLY FOR FUNDING. Full-width, teal background, white text, centered. Links directly to an embedded application form (Google Form or Typeform). The application page is extremely clean — no sidebar, no distractions, just the form with Y-Point branding.

Below the button, a secondary CTA: "Not ready to apply? Subscribe to Signal from the Lab →"

5. FOR LPs AND PARTNERS

A smaller, separate section below the founder CTA. Headline: "Deep tech decade." Copy: "We work with institutions, corporates and co-investors who want considered exposure to research-led ventures." CTA: START A CONVERSATION. Metadata: CATEGORY II AIF · PRIVATE PLACEMENT.

09

Complete Information Architecture

HOMEPAGE FLOW

The website is a single continuous scroll on desktop (with section-based navigation), designed as a journey that builds understanding progressively:

SECTION	USER UNDERSTANDS
01 — About Us	Who they are, why they exist, how IIT Bombay/SINE creates their edge
02 — Portfolio	What they have backed, across which sectors, at what stage
03 — Team	Who is behind it, what capabilities they bring, what credentials they hold
04 — Focus Area	What they believe about each sector, how deeply they think about technology
05 — Content	What they know, what they are reading, what intellectual capital they produce
06 — Apply	Whether this is the right fund, and how to engage

NAVIGATION STRUCTURE

Horizontal top navigation with numbered sections. Sticky on scroll. Dark background when scrolled.

NAVIGATION ITEM	ANCHOR	SECONDARY NAV
01 — About Us	#about	Premise · Ecosystem · Why Us · Philosophy · Fund Structure
02 — Portfolio	#portfolio	Matrix · Sectors · Companies · Lifecycle
03 — Team	#team	IC · Capabilities · Credentials · Ecosystem
04 — Focus Area	#focus	Map · AI · Semicon · Materials · Space · Climate · Life Sci
05 — Content	#content	Podcast · Research · Essays · Ecosystem · Events
06 — Apply	#apply	For Founders · For Partners

ICONOGRAPHY

No decorative icons. Functional icons only: navigation arrows, play buttons, external links, filter controls. Style: 1.5px stroke, monochrome, matching the thin-rule aesthetic. Lucide or Phosphor icon set. Sector hexagons in the Focus Area map use minimal abstract symbols (a chip for semiconductors, a molecule for materials, etc.) — these are the only representational graphics on the site.

10

Design System Summary

PROPERTY	SPECIFICATION
Typography	Inter or Satoshi (primary), system sans-serif (fallback)
Type scale	Display 48 → H1 32 → H2 24 → H3 16 → Body 15 → Caption 12 → Label 10
Colour	Monochrome (#0A0A0A → #FFFFFF) + single teal accent (#0D7377)
Spacing	8px base unit. Generous vertical rhythm. 16px side gutters (mobile).
Borders	0.5px #E5E5E5 horizontal rules. 1px for card borders. 2px for accent bars.
Corners	4px for cards and interactive elements. No large rounded corners.
Shadows	None. Depth through spacing and colour, not elevation.
Images	B&W portraits only. No stock photography. No AI-generated imagery.
Diagrams	Monochrome + teal. Thin strokes. Generous padding. Helvetica labels.
Animation	Scroll-triggered. Ease-out. 600–1000ms. No parallax. No particle effects.
Dark mode	Invert to #0A0A0A background, #F5F5F3 text. Teal accent remains.
Breakpoints	Desktop 1200+ · Tablet 768–1199 · Mobile <768
Grid	12-column desktop · 8-column tablet · 4-column mobile
Max width	1280px content area with centered layout

11

Final Recommendations

PRIORITY ACTIONS

PRIORITY	ACTION	IMPACT
1 — Critical	Build the ecosystem diagram (About section)	The fund's single strongest visual differentiator. Without it, the IIT Bombay/SINE relationship
2 — Critical	Create the portfolio section with company data	Investors and founders cannot assess the fund without seeing track record.
3 — Critical	Build the team page with capability matrix	Institutional credibility requires visible, credentialed team members.
4 — High	Develop sector thesis frameworks (Focus Areas)	This is where intellectual differentiation lives. The current one-line cards are insufficient.
5 — High	Design the Apply section with qualification framework	Reduces unqualified applications. Communicates seriousness.
6 — Medium	Build the content archive	Positions the fund as a thinking institution, not just a capital provider.
7 — Medium	Implement the portfolio matrix (scatter plot)	Advanced visual that signals analytical sophistication to LPs.
8 — Lower	Add scroll-triggered diagram animations	Polish that reinforces the premium feel. Not structural.

CONTENT REQUIREMENTS

The redesign requires the following content inputs that must come from the fund team:

CONTENT	STATUS	NOTES
Portfolio company list with details	Required	Logo, description, sector, stage, technology, milestones
Team member portraits and credentials	Required	B&W professional photography recommended
Investment committee bios (3 bullets each)	Required	Not paragraphs — credential bullets
Verified fund metrics	Required	Only publish numbers that can be substantiated
Sector thesis detail (per sector)	Required	The framework is provided; specific data points needed
Podcast episodes archive	If available	Audio files, guest details, episode summaries
Essay and research archive	If available	Existing published content to populate
Application form (Google Form)	Required	Clean, structured application form

WHAT NOT TO DO

This document deliberately avoids:

— Stock photography of labs, circuits, or scientists

— AI-generated futuristic imagery

— "We are passionate about..." or "Our mission is..." copy

— Excessive gradients, shadows, or rounded corners

— SaaS-style dashboard aesthetics

— Startup-style "hero with floating laptop" layouts

— Animated background particles or geometric noise

— Corporate buzzwords ("synergy", "leverage", "paradigm")

— Excessive social proof ("Featured in TechCrunch")

— Vanity metrics without verification

THE PRINCIPLE

> *"Optimise for the amount of understanding created per screen, not the amount of information displayed."*

The website should make the fund feel technically sophisticated, selective, institutional, founder-friendly, research-driven, connected to the deeptech ecosystem, and long-term oriented. Every element — every diagram, every headline, every interaction — should serve this purpose. Nothing else earns its place on the page.
